

Linx delivers long-term benefits for dairy company

Reliability and low cost of ownership are key factors in the success of two Linx 7900 CIJ (continuous ink jet) printers incorporating head traversing units which are printing 40,000 yogurt pots every hour at leading Israeli dairy company Tnuva Eilon Tavor.

The installed printers are the latest in over 100 Linx machines that are in operation at Tnuva sites across Israel as part of a long-standing 14 year partnership between the company and Linx's Israeli distributor International Process Equipment Ltd (IPE).

The 7900 models are working in conjunction with an Erca Form Fill Seal machine providing two lines of code – best before date and printing time – onto the printed paper lids.

Advanced QuickSwitch® software allows fast, time-saving changeovers between products or messages, with simple automated set-up, and the printer's SureFill® system ensures mistake-proof refills

In addition, Linx PrintSync® enables automatic print format selection, using the line speed to provide the best possible print quality.

The Linx 7900 has been designed to deliver the lowest possible running costs, featuring dynamically adjusted service intervals that mean customers only pay for vital maintenance. It is able to run for up to 9,000 hours or 18 months between services.

The printer incorporates Linx's successful FullFlush® automatic printhead cleaning system, while routine maintenance is minimal and, in contrast to other printers on the market, there are no expensive ink system assemblies to replace at every service. Similarly, there is no need to change the ink tank between services, another hidden cost with other ink jet printers.

The Linx printers were installed as part of Tnuva's continuous improvement programme to renew existing coders, and selected after a comparison with an alternative ink jet model.

Tnuva Dairy receives long-term benefits

Key Product Benefits

Linx 7900

- Up to 9,000 hours or 18 months between servicing
- Linx Insight® enables remote monitoring from a smartphone.
- Automated code setup using a barcode scanner or data from a PC or PLC

The Linx 7900 is a CIJ printer comes with everything you expect as standard. Coding up to 5 lines of text, graphics, logos and Data Matrix 2D codes, it includes a range of automated features to help reduce code errors and increase productivity.

The Linx 7900 has a range of capabilities to help food manufacturers print perfectly, minimise mistakes and even measure production output. Its software delivers quick, time-saving changeovers between products or messages, while simple automated set-up helps ensure users get it right first time.

The dirt trap-free IP55 rated enclosure, with no doors to open for refills, prevents contaminants getting into the printer to further reduce the risk of unscheduled stoppages and helps to ensure a cleaner working environment, particularly important for food applications.

The printer also enables users to record the number of codes printed and stoppages with an internal print history log. Line performance can be measured against targets without the need for manual recording.
