

LINX

## THINGS TO CONSIDER WHEN CODING ON BOTTLES

### 1 CODE CONTENT

Are you looking for simple, one line Julian dates, or will you have more extensive requirements such as extra lines or different orientations?

### 2 SUBSTRATE

What type of material are you printing onto, and will you require different ink colours?

### £ COST

Think not just about the initial purchase price, but also the overall cost of ownership. Is it a reliable and efficient machine?

### LINE SPEED

Will the printer you are looking at keep up with your production line, will you be compromising the quality of the print if it cannot?

### FACTORY ENVIRONMENT

Is your coding equipment going to be exposed to a wet or dusty environment? You may require an IP rated machine.
